

How to Prepare for Your Free Insulation Estimation

Read our instructions on how to prepare your home and what to expect on install day.

1.1 - Payment

1.2 - Preparing for Loose Fill Application

1.3 - Preparing for Spray Foam Application

1.4- Preparing for Cavity Fill Application

1.1 Payment

No need to worry, this is a free on-site estimate!

1.2 Preparing for Loose Fill Estimate

Prior to Arrival:

1. Clear the pathway to your attic access.
2. For houses with the attic access opening in the closet, remove all clothes and belongings from the closet prior to arrival.
3. If the attic access is in the garage, please remove your car prior to arrival.
4. Make arrangements with the office if you cannot be there to let our representative in.

What to Expect Upon Arrival:

1. You will be greeted at the front door by our estimator. Together, you will walk through a visual inspection of the house, taking note of the various access points. Ceilings, bathroom exhausts, recessed lighting, bulkheads, slopes and coffered ceilings will be examined.
2. The estimator will visually inspect the attic space and give recommendations for work that needs to be completed
3. Make arrangements with the office if you cannot be there to lock the house up when complete.
4. When finished, the estimator will take their equipment back to the truck and clean up any floor coverings.

Please note: Our estimator will do their best to cleanup after the installation. However, you may see some fine dust settling up to a day after the insulation is installed.

1.3 Preparing for Spray Foam Application

Prior to Arrival:

1. Make arrangements with the office if you cannot be there to let the estimator in.
2. Remove anything within a 4 ft distance of the spray area (eg. furniture, drywall, tools)
3. If the area is planning to be refinished, have a plan in mind that you are ready to discuss with the estimator

What to Expect Upon Arrival:

1. You will be greeted at the front door by our estimator. Together, you will walk through a visual inspection of the house, taking note of the various access points. Ceilings, bathroom exhausts, recessed lighting, bulkheads, framing, slopes and coffered ceilings will also be noted depending on the application.
2. The estimator will discuss the best route to the spray area and what to expect on an installation date.
3. Make arrangements with the office or estimator if you cannot be there to lock the house up when complete.

1.4 Preparing for Cavity Fill Application

Prior to Arrival:

1. Move any items along a spot on an exterior wall on each level as our estimator will need to drill a hole to see if the job can be completed or not.
2. Make arrangements with the office if you cannot be there to let the workers in.

What to Expect Upon Arrival:

1. You will be greeted at the front door by our estimator. Together, you will walk through a visual inspection of the house, taking note of the various access points. Ceilings, walls and slopes will also be noted.
2. The estimator will discuss the details of the process.
3. The installer will drill 1 hole on each level that you would like the potential work to be completed. The customer is responsible for final finishing (e.g, sanding, finish mud and painting).
4. Make arrangements with the installer if you cannot be there to lock the house up when complete.

Please note: Our installers will do their best to cleanup after the installation. However, you may see some fine dust settling up to a day after the insulation is installed.
